

The system behind the card.

Every token, type ramp, and component used to build the XanPay landing page — clean fintech, USDC-anchored, precise. Built to feel like a card you'd keep in your wallet, not a crypto product.

- Hanken Grotesk
- JetBrains Mono
- #2775CA
- 8px grid

01 Color

Anchored to USDC blue. A deep navy ink carries text and dark surfaces; a single cool accent does all the lifting. No gradients beyond the brand mark and card.

BRAND & ACCENT

USDC Blue

02 Typography

Hanken Grotesk for all UI and prose — tight tracking on display sizes. JetBrains Mono for every number, ID, balance, label, and line of code. Money is always mono.

03 The XanCard

The hero element and the whole product metaphor. Translucent glass over a blue glow, a gold chip, a masked mono card ID, a mono balance, and the USDC badge glowing through. Everything orbits this.

04 Buttons

Two audiences, two weights. The user CTA is always the filled accent; the developer CTA is always the quieter outline. Both lift 2px and deepen their shadow on hover. 12px radius.

06 Components

The repeating building blocks: numbered step nodes, hoverable use-case cards, and the dark syntax-highlighted code block. White cards on light; the navy surface for developer-facing moments.

STEP NODE

01

Sign up
Email and you're in. No exchange, no extension.

→

02

Fund your card
Deposit USDC once, secured by Circle MPC.

→

03

Link to a platform
Connect the card and pay only for what you use.

07 Motion & geometry

Physical, springy, restrained. Reveals drift up on a single decelerating curve; the card bobs, tilts, and tracks the cursor; backgrounds parallax with inertia. Radii and spacing ride an 8px grid.
